Summer School
2017–2019

Designing Food Value Chains

TO FOSTER THE 2030 AGENDA FOR SUSTAINABLE DEVELOPMENT

2017 at Zurich University of Applied Sciences, Switzerland
Fokus SDG 12
Responsible Consumption and Production

2018 at University of Agricultural Sciences, Bangalore, India
Fokus SDG 2
Zero Hunger

2019 at University of Ljubljana, Slovenia
Fokus SDG 15
Life on Land
Challenge for humanity
The existing food system is not in a position to feed the world’s population over a prolonged period of time. The main challenges for humanity are not only to reduce environmental pollution, to use resources more efficiently, to preserve soil fertility, and to close nutrient cycles, but also to have a stable harvest, to distribute food-stuffs more efficiently, to avoid waste, and to achieve fairer trade relations and more food sovereignty. In this regard, the restructuring of existing Food Value Chains (FVC), as well as the development of new sustainable ones on a local, at regional and international levels, plays an important role. Exactly which goals this development and restructuring process is expected to focus on are shown by the Sustainable Development Goals (SDG) established by the United Nations (UN), which came into effect on 1 January 2016.

Summer School concept
The Summer School begins with Phase 1, in which participants prepare themselves for the content of the Summer School with an individual e-learning. Phase 2 consists of working on a mini case study of up to 30 hours. Phase 3 is the 12-day Summer School study week, which consists of an intensive programme of workshops, excursions, project work and input presentations.

All registered students prepare for the Summer School study week through participation in the e-learning and planning of the mini case study. Students present their case studies during the Summer School.

What will you learn during the Summer School?
During the international Summer School, we will address strategies, capabilities and challenges which are concerned with the structuring of FVCs towards a sustainable food system. As participants, you will be given the opportunity to develop sustainable FVCs and to realise these in a local context. From this you will gain:

• A more in-depth knowledge of sustainability in the food system and the challenges associated with it
• Practicable knowledge concerning the structuring of sustainable value chains
• A greater understanding of the SDGs in the context of sustainable FVCs
• A firm knowledge basis upon which future solutions for sustainable FVCs can be developed and put into practice in a local context
• Differentiated skills concerning one of the following SDGs: «Sustainable Development and Consumption», «Zero Hunger» and «Life on Land»
• The ability to understand global challenges in a local context (environment, politics, society, economy) and to identify possible solutions
• Intercultural competence to enable you to work in an international context

Phase 1: E-Learning
As preparation for the Summer School, students individually improve their specialist knowledge through three e-learning modules.

• E-learning Module 1: Sustainability and the Global Food System
• E-learning Module 2: Food Value Chain Design
• E-learning Module 3: Food Systems and the Agenda 2030

All students wishing to take part in the 2019 Summer School study week must have successfully completed the e-learning by the end of May 2019.

Phase 2: Mini case study
Students engage with their respective area of focus in the context of their home country or place of study (2017: Sustainable Consumption and Production; 2018: Zero Hunger; 2019: Life on Land). In this regard, they carry out a mini case study comprising research conducted on a topic relevant to the local food system or a local FVC which students have chosen themselves. The following are examples of possible topics:

• Exemplification of a local problem in the FVC context
• Exemplification of a local FVC which supports one of the elements of the 2030 Agenda for Sustainable Development
• Description of how a particular FVC could be redesigned in order to support one of the elements of the 2030 Agenda for Sustainable Development
Suitable methodologies for working on the mini case studies include a review of the literature, interviews with stakeholders (distributors, producers, consumers), statistical data analysis etc. The time invested in the mini case study should not exceed 30 hours.

During the Summer School, students disseminate their mini case studies through a poster presentation. The creation of the poster is part of the 30 hours allocated for Phase 2.

The idea for the content of the mini case study is submitted at the same time as registering for the Summer School. For the 2019 Summer School study week, the case study will be carried out from February to July.

During the mini case study, coaching will be offered by the Research Institute of Organic Agriculture (FiBL) and Zurich University of Applied Sciences (ZHAW).

Phase 3: Summer School study week
From August 19th to 30th 2019, the 12-day Summer School will be held in Ljubljana Slovenia. It will address the topic «Life on Land (SDG 15)».

The Summer School program includes input presentations from a number of invited speakers, plenary discussions, workshops and excursions. As participants in the Summer School study week, you work in a small group on a case study and develop a concrete concept concerning the structuring of sustainable FVCs.

Eligibility
Active BSc students (from the 4th semester onwards) and MSc students who are focussing on sustainability, sustainable FVCs or other associated topics (e.g. agricultural science, food industry, environment, rural development, geography) may take part in the Summer School. Students must be enrolled at a university at the time of their application.

The number of participants is limited to 30 persons. Every year 10 students from the ZHAW and 7 students from each of the partner universities are chosen. The remaining places will be allocated to BSc or MSc students from other universities.

Credit points
For participation in the Summer School combined with a successful completion of the e-learning modules and the independent carrying out of the mini case study, there are 4 ECTS points available.

Important dates
In order to register for the Summer School, please visit the homepage www.gof-summerschool.org.
From 2017 to 2019, the Summer School will take place at three different universities and countries, the emphasis changing each year. Students only register for one Summer School at a time.
Deadlines for registration as well as the timescale for Phases 1-3 of the Summer School can be found in the following table:

<table>

After applications have closed, we will contact you as soon as possible to let you know if you have been offered a place at the Summer School. Participants who are accepted receive an email confirming their admission onto the program, together with an Admissions Letter.

**Travel information**

The requirements that must be met for a short-term stay in Slovenia are given here: [https://www.schengenvisainfo.com/slovenia-visa/](https://www.schengenvisainfo.com/slovenia-visa/)

All visa procedures remain the participant’s responsibility and must be arranged prior to arriving in Slovenia. Please note that Summer School participants cannot apply for any kind of student visa since they are not official students in Slovenia.

Please do not book any travel tickets (flight, train, bus) or accommodation before you receive the confirmation to attend the Summer School. Once your attendance is confirmed, accommodation will be arranged for you. Participants are responsible for their own travel arrangements and payments.

**Registration**

Registration documents can be found each year from October to December at [www.qof-summerschool.org](http://www.qof-summerschool.org). To apply correctly, complete all fields of the application form. This includes the following:

- Personal Information
- English Skills
- Motivation
- Mini Case-Study
- Expectation
- Topic interest
- Additional Information
- Terms and conditions

**Fees**

All expenses for accommodation and excursions are covered. However, Summer School participants are required to make a contribution. The amount is:

CHF 100

This fee must be paid by the end of February 2019.
Organizers
The Summer School is a collaboration between the Institute of Natural Resource Sciences at ZHAW and the Research Institute of Organic Agriculture FiBL.

The partner universities are:

University of Ljubljana
Biotechnical Faculty
Jamnikarjeva ulice 101
1000 Ljubljana, Slovenia

About the Institute of Natural Resource Sciences at ZHAW
The ZHAW Institute of Natural Resource Sciences is a teaching and research institution that perceives the functional diversity of landscapes and considers them as a central resource. The focus of the institute includes assessment and monitoring of landscape influences such as agriculture, regional development and renewable energy production, as well as the preservation of the landscape for people, animals and plants. The way in which these issues are examined is dominated by life-cycle thinking and the goal of making closed production cycles an essential part of our basic approach.

Course content and research questions are based on these principles, the topics mentioned above and the central requirement of social relevance. Accordingly, we measure the success of the institute as an educational and research establishment by the influence of our graduates in the world of work and the implementation and impact of our research projects.

About FiBL
The Research Institute of Organic Agriculture (FiBL) is one of the world’s leading research and information centres for organic agriculture, and employs over 175 experts. One of the major research topics at the FiBL is sustainability, with a focus on agricultural methods, food production and food processing. The overall goal of its activities is the development of practice-oriented solutions for environmental, economic and social problems in food production. FiBL is involved in numerous international projects – not only in research, but also in development. The close links between different fields of research and the rapid transfer of knowledge from research to advisory work and agricultural practice are FiBL’s main strengths.

Funding
The Summer School DESIGNING FOOD VALUE CHAINS TO FOSTER THE 2030 AGENDA FOR SUSTAINABLE DEVELOPMENT is supported by the Mercator Foundation Switzerland.
